

DISK-VIDEO-FILES CD - DVD LABELS

OPAK – white

Sticking a new label on an old one is always a problem. With **OPAK – white** it is solved. **OPAK-white**, a special coloured glue, so that nothing from the old label can be seen anymore.

- Important when re-using a Diskette, Box-File or CD Rom
- No remove of the old label necessary

CD-DVD Labels

When using a CD-DVD label always two problems are coming up .

- How to stick the label in the correct position on the CD-ROM
- Why to use the standard sheet of two labels, when needing only one.

We settled both problems:

- **Alignment help**

You just need an empty open CD box as your tool.

The **Alignment help** shows the correct position in CD box and following the simple **Instructions** - printed on each sheet-. Now you can stick the CD label in the real correct position on the CD-ROM.

- **Sheet separation**

You can separate the sheet along the **perforation** in two parts. Now, just print the one label you have done and the other part of the sheet can be used, whenever you need another CD label.

More CD-DVD labels you can find with [PRINTLINE Inkjet Specials](#)
